# National Crane 600E2 Series

## Product Guide

### Features

- 27,4 m (90 ft) four-section boom
- 18,1 t (20 USt) rating
- Self-lubricating Easy Glide wear pads
- Internal anti-two block

# Features

## Improved serviceability

- Bearings on the boom and retract cables can be greased through access holes in the boom side plates.
- Removable winch allows the internal telescoping cylinder to be removed quickly, without dismantling the boom
- Internal anti-two-block wire routing eliminates external reel and wire to protect crane components
- The boom sheave case is open, allowing access to replace the internal anti-two-block wire and to observe internal boom components
- Internal boom parts have been reduced, decreasing service time when rebuilding the machine

## Four-section boom

At 90 ft, the Series 600E2 four-section boom is the longest in its size range. The long boom allows the operator to perform more lifts without the use of a jib, reducing setup time and improving efficiency.

## Easy Glide boom wear pads

Easy Glide boom wear pads reduce the conditions that cause boom chatter and vibration. The net result is smoother crane operation.

# Features

## Best in class performance and serviceability

- The steel torsion box and flatbed further reduce frame flex
- Speedy-reeve boom tip and sheave blocks simplify rigging changes by decreasing the time needed to change line reeving
- Crane components painted before assembly reduce the chance of rust, improve serviceability and enhance the appearance of the crane
- A control knob located on the swing motor brake release valve can be easily adjusted to the crane operator's swing speed preference
- Rear stabilizers include an independent stabilizer control and bolt/clamp on mounting

° Product may be shown with optional equipment.

# Mounting configurations

The configurations are based on the Series 600E2 with an 85% stability factor. The complete unit must be installed in accordance with factory requirements and a test performed to determine actual stability and counterweight requirements since individual truck chassis vary.

## Configuration 1 with Torsion Box – 180° Full Capacity Work Area

Working area .....	180°
Gross Axle Weight Rating Front.....	6350 kg (14,000 lb)
Gross Axle Weight Rating Rear.....	15 442 kg (34,000 lb)
Gross Vehicle Weight Rating.....	21 773 kg (48,000 lb)
Wheelbase.....	589 cm (232 in)
Cab to Axle/trunnion (CA/CT) .....	417 cm (164 in)
Frame Section Modulus (SM) under crane:	
(758 MPa 110,000 PSI).....	261 cm <sup>3</sup> (15.9 in <sup>3</sup> )
Frame Section Modulus (SM) over rear stabilizers:	
(758 MPa 110,000 PSI).....	213 cm <sup>3</sup> (13 in <sup>3</sup> )
Stability Weight, Front .....	3629 kg (8000 lb) minimum*
Stability Weight, Rear.....	4763 kg (10,500 lb) minimum*
Estimated Average Final Weight .....	13 608 kg (30,000 lb)

Requires front SFO stabilizer to give machine full capacity 360° around the truck. Truck must meet the minimum requirements above. Front stabilizer gives the machine a solid base, helping the operator control loads precisely. Extended front frame rails required for SFO installation.

## Configuration 2 with Torsion Box – 360° Full Capacity Work Area

Working area .....	360°
Gross Axle Weight Rating Front.....	6350 kg (14,000 lb)

Wheelbase.....	589 cm (232 in)
Cab to Axle/trunnion (CA/CT) .....	417 cm (164 in)
Frame Section Modulus (SM) under crane:	
(758 MPa 110,000 PSI).....	328 cm <sup>3</sup> (20 in <sup>3</sup> )
Frame Section Modulus (SM) over rear stabilizers:	
(758 MPa 110,000 PSI).....	213 cm <sup>3</sup> (13 in <sup>3</sup> )
Stability Weight, Front .....	3130 kg (7700 lb) minimum*
Stability Weight, Rear.....	3175 kg (10,500 lb) minimum*
Estimated Average Final Weight .....	13 879 kg (30,600 lb)

Allows the installation of the Model 600E2 on a chassis. In most cases, the chassis will not require reinforcing, and the amount of counterweight required is minimized, increasing payload capacities. Extended front frame rails required for SFO installation.

### Notes:

- Gross Vehicle Weight rating (GVWR) is dependent on all components of the vehicle (axles, tires, springs, frame, etc.) meeting manufacturers' recommendations: always specify GVWR when purchasing trucks
- Diesel engines require a variable speed governor and energize-to-run fuel solenoid for smooth crane operation; electronic fuel injection requires EET engine remote throttle

- All mounting data is based on a National Series 600E2 with an 85% stability factor
- The complete unit must be installed in accordance with factory requirements, and a test performed to determine actual stability and counterweight requirements per SAE J765; contact the factory for details
- Transmission neutral safety interlock switch is required with optional remote control

*\*Estimated axle scale rates prior to installation of crane, stabilizers and subbase for 85% stability.*

*THIS CHART IS ONLY A GUIDE AND SHOULD NOT BE USED TO OPERATE THE CRANE.*

*The individual crane's load chart, operating instructions and other instructional plates must be read and understood prior to operating the crane.*

## Series 660E2: 18,3 m (60 ft) boom

National Crane will send you a chart on request – or you may secure needed load rating information through your nearest National Crane dealer.

### CAUTION:

- Do not operate crane booms, jib extensions, any accessories or loads within 3 m (10 ft) of live power lines or other conductors of electricity.
- Jib and boom capacities shown are maximum for each section.
- Do not exceed capacities at reduced radii
- Load ratings shown on the load rating charts are maximum allowable loads with the outriggers properly extended on a firm, level surface and the crane leveled and mounted on a factory recommended truck.
- Always level the crane with the level indicator located on the crane.
- The operator must reduce load to allow for factors such as wind, ground conditions, operating speeds and their effects on freely suspended loads.
- Overloading this crane may cause structural collapse or instability.
- Weights on any accessories attached to the boom or loadline must be deducted from the load chart capacities.
- Do not exceed jib capabilities at any reduced boom lengths.
- Do not deadhead lineblock against boom tip when extending boom or winching up.
- Keep at least three wraps of loadline on drum at all times.
- Use only specified cable with this machine.
